Schnabel Engineering DC, Inc. is an affiliate of Schnabel Engineering, Inc.

Engineering services in the following states are performed by Schnabel's respective affiliated entity: Michigan: Schnabel Engineering of Michigan, Inc.; New York/Connecticut: Schnabel Engineering of New York; North Carolina: Schnabel Engineering South, P.C.

We've built a reputation for solving complex geotechnical challenges on over 4,000 transportation projects across the U.S. With experience that extends across land, sea, and air transport, Schnabel is a valued partner to owners, designers, and contractors in this industry. We hold active contracts with numerous federal, state, and local DOTs, transit agencies, freight rail operators, airports, and seaport facilities.

All told, we've worked on design-build and P3 transportation projects collectively valued at over \$15 billion. This experience translates into innovative design, construction cost savings, schedule attainment, and satisfied clients who appreciate our exceptional client service, team-oriented culture, and distinct array of services beyond the usual geotechnical engineering.

As the designer of record for tunnels, dams, and complex geostructures such as specialty foundations, underpinning, ground improvements, excavation support and slope stabilization, we specialize in some of the riskiest design elements for transportation projects. We also bring expertise in pavements, geohazards, instrumentation, hydraulics and hydrology, and environmental contamination.
